

Appl. No. 09/927,835
Amdt. Dated April 9, 2004
Reply to Office Action of January 13, 2004

Pending Claims:

This listing will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claim 1 (previously presented): A disposable undergarment comprising:

transversely opposite side edge portions extending in a longitudinal direction;

longitudinally opposite end portions extending in a transverse direction;

a front waist region;

a rear waist region;

a crotch region extending between said front waist region and said rear waist region in said longitudinal direction;

a pair of elastically stretchable first wings extending outward from transversely opposite side edge portions of at least one of said front waist region and said rear waist region, said first wings having first proximal side edge portions lying on said transversely opposite side edge portion of said waist region and first free side edge portion spaced outwardly from said first proximal side edge portion in said transverse direction, said first free side edge portions being providing with means to connect said front and rear waist regions to each other, said first proximal side edge portions being contiguous to said transversely opposite side edge portions of said crotch region and a stretch stress

generated in said first wings as said front and rear waist regions are connected to each other is exerted upon said undergarment in a waist-surrounding direction as well as in a thigh-surrounding direction; and

a pair of elastically stretchable second wings extending outward from said transversely opposite side edge portions of said waist region in said transverse direction, said second wings being placed upon said first wings so that longitudinal upper ends of said first wings and longitudinal upper ends of said second wings coextensively overlap each other, said second wings having second proximal side edge portions lying on said transversely opposite side edge portions of said waist region and second free edge portions spaced outward from said second proximal side edge portions in said transverse direction and fixed to said first free side edge portions, said second proximal side edge portions being non-contiguous to said transversely opposite side edge portions of said crotch region, and a stretch stress generated in said second wings as said front and rear waist regions are connected to each other is exerted upon said undergarment in a waist-surrounding direction.

Claim 2 (previously presented): The undergarment according to Claim 1, wherein a transverse dimension D1 of said first wings as measured from first proximal side edge portions thereof to first free side edge portions thereof and a transverse dimension D2 of said second wings as measured from second proximal side edge portions to second free side edge are in a relationship of D1 being greater than or equal to D2, and values of said stretch stress generated in said first and second wings as these first and second wings are stretched outward in aid transverse direction are in a relationship

of the values of said stretch stress of said first wing being less than values of said stretch stress of said second wing.
